

TOP 5 REASONS TO INSTALL A SANUVOX UV AIR TREATMENT SYSTEM

1. A Sanuvox UV Air Treatment System is specifically designed to destroy and control airborne bio-chemical contaminants such as viruses, bacteria, mold, chemicals, VOCs, fumes and odors. Although we incorporate filters into our HVAC system to remove particulates from the air such as dust and dirt, bio-chemical contaminants pass through a filter like sand through a tennis racket. Sanuvox UV Systems will address the contaminants that a filter cannot address.
2. According to Toxicologist Roger C. Inman “people get so excited about their drinking water and we only drink two liters of water a day, yet we breathe 20,000 liters of air a day and these poisons are directly absorbed by the lungs. It is a big problem.”
3. We seal our homes and buildings tight to save energy in order to save money and resources heating and cooling the air. A major disadvantage to this is not being able to bring in enough fresh outside air to lower the concentrations of biological & chemical contaminants within the home. These airborne contaminants include viruses, bacteria, mold, chemicals, VOCs, fumes and odors.
4. The Sun delivers specific UV wavelengths that destroy both biological and chemical contaminants in the atmosphere. Just like the Sun’s UVC and UVV rays, Sanuvox UV Systems produce the exact same UV wavelengths, bringing the same natural outdoor air treatment process into your home.
5. Sanuvox UV Systems have been tested by independent third party institutions and organizations such as: McGill University, Penn State University, US Dept. of Homeland Security and the US EPA. Results have been published in the peer reviewed Lancet Medical Journal as well as the Infection Control & Epidemiology Journal and the US Office of Research and Development. In all studies, Sanuvox UV Systems have shown dramatic improvements in Indoor Air Quality.

Saber Pro Wireless 24V

16" UVC Germicidal Coil Cleaner.
Destroys mold & other microbial growth on the coil

Sanuvox RMax

UVC / UVV In-Duct Whole Home Air Treatment System.
Destroys bio-chemical contaminants. Treats up to 4,000 sq.ft.
