

**Save Energy with a Clean Coil**

**SABER PRO WIRELESS 24V**

**UV Coil-Cleaner**

When a bio-film (a coating of microbial growth) covers a coil, it acts as an adhesive, attracting dirt and coating the fins of the coil. This results in an odor emanating from the equipment and a loss of energy efficiency as the equipment must work harder to provide the same air temperature.

Installed on the air conditioning's evaporator coil, the Saber Pro keeps the system running at top efficiency, saving you electricity and preventing the coil from becoming a source of bad air quality.

The Saber Pro features a wireless LCD monitor to provide real time status updates.

It is supplied with a mounting bracket, which can be installed on the side of the duct allowing the UV lamp to be inserted in-between or over the coil.

**BENEFITS**

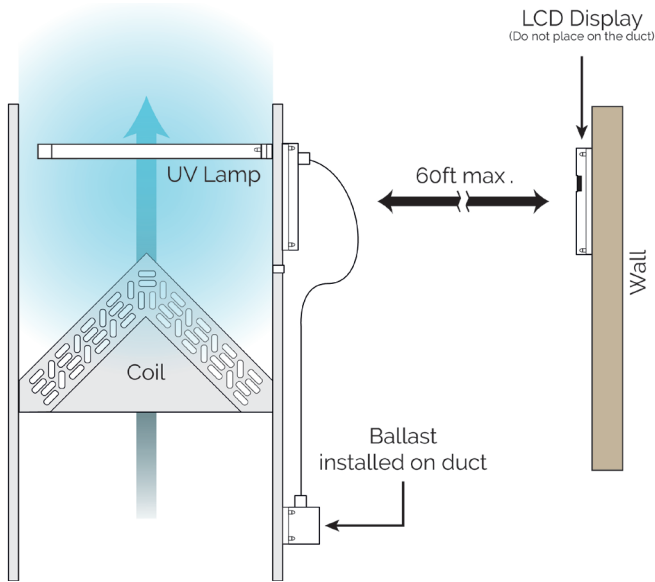

- Chemical free coil cleaning
- Improves AC systems efficiency
- Reduces "dirty sock" syndrome

**FEATURES**

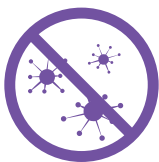

- 16" UVC Germicidal lamp
- 3" Wireless LCD display
- Electronic 24V ballast
- Magnetic multi-bracket for various installation scenarios

**WARRANTY**

- Lamp: 1 year
- Ballast: 5 years
- Monitor: 1 year

Installation:  
Facing the evaporator  
coils (in-duct)
