

Twice as Much Germicidal Power!

SANUVAIR® S1000 CRO

Air Purification System with HEPA Filter & 2 Germicidal Lamps

The Sanuvair® S1000 CRO is designed to recirculate the air continuously in front of the UVC lamps, thus filtering and sterilizing the air in the room at a maximum rate. The power of the UVC gives enough contact time to reach a disinfection of most biological contaminants, all combined with HEPA filtration that captures particles with a diameter of more than 0.3 microns at 99.97%.

Sterilized and filtered quality air is then distributed throughout the white room.

BENEFITS

Combined HEPA filtration system and UVC purification for a complete IAQ solution in one unit

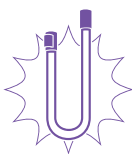

- Improves air quality
- Purifies 700 cubic feet per minute

FEATURES

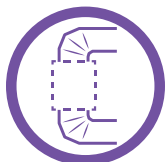

- 2 patented UVC 'J' lamps
- Two pleated 1" pre-filters
- One 2.5" HEPA filter
- 2 high output ballasts

WARRANTY

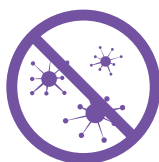

- Lamps: 2 years
- Ballasts: 3 years

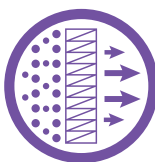

UV 'J' Lamp

Installation : Added ducts

Eliminates germs

HEPA filter: eliminates mold in the air

Purifies up to: 15,000 cu.ft.
